National Reputation Local Excellence

About Abscope

Our company employs trained construction/ environmental professionals supported by a diverse office staff dedicated to customer service. Abscope's leadership team possesses an extensive background in environmental remediation, including soil and sediment excavation, soil shoring/stabilization, groundwater treatment, wetland restoration and abatement of hazardous materials. We staff our projects with experienced heavy equipment operators, technicians and laborers who are led by supervisors focused on employee safety and customer satisfaction.

Founded in 1989, our roots go back to 1958, when John Romagnoli started a heavy-highway construction company focused on road and site development. From there, Jack Romagnoli and Jerry Romagnoli have built Abscope into one of the premier environmental remediation construction firms in the country. In 2019, Bob Romagnoli joined Abscope to not only continue the family business, but also to enhance the firm's overall tradition of excellence.

Abscope's Safety Culture

Over the past decade, Abscope's adherence to health and safety has transformed from an important priority, to a core corporate value. The commitment to Abscope's behavior-based safety program has been the linchpin of our transformation. Each employee truly understands that our service mission is unattainable without a safe working environment for all stakeholders. Site superintendents continue to reinforce each employee's duty to safely assess each work task prior to engagement, and to mentally consider "what could go wrong." Our employees have not only become adept at trouble shooting/improving current project methods, but have applied Abscope's safety approach to their personal endeavors.

Key components of our program include:

- Daily, interactive site safety meetings, inclusive of subcontractors
- New employee Safety Mentoring Policy
- Constant JSA modification/improvement
- Monthly company-wide safety meetings including representatives from all active projects
- Unannounced site safety audits performed by independent consultants and/or executive management
- Engagement of accident intervention service (WorkCare)

It is Abscope's obligation to make certain that all employees have the proper skills to make safe decisions in the work place; as such, management requires employee participation in the following:

- Abscope's annual training conference (4 days)
- Regulatory training (OSHA 40 hr, American Red Cross CPR/first aid)
- Behavior-based loss prevention training
- A variety of task-specific training courses (confined space, trench awareness, elevated work, crane safety, etc)
